

NIKKO SELWYN M. CAUSAPIN

Software Engineer

About Me

A BSIT student specializing in Business Analytics and software development. I build web and desktop applications that solve real-world problems through automation, data management, and analytics. My interests include full-stack development, data-driven systems, and AI-powered applications.

Projects & Experiences

Pig-Sikap

- A web-based livestock management and profitability analytics system for community-based pig farming operations. It helps manage pig inventory, health records, expenses, sales, reports, and profitability insights for better decision-making.

Lumbangan System

- A web-based Barangay Management Information System for digitizing barangay service workflows. It supports resident document requests, admin approvals, request status tracking, document type management, proof uploads, and document templates.

Dirty2Data

- A data cleaning and analytics platform built to guide users from dataset upload to visualization. It supports profiling, cleaning, recommendations, export, charts, missing value analysis, correlation, box plots, insights, and cleaning recipes.
